

Rotary Vane Pumps

PASCAL series

SD series 2 stages

2005SD - 2010SD - 2015SD - 2021SD - 2033SD - 2063SD - 2100SD

SD series rotary vane pumps address the requirements of all major vacuum applications in diverse industries.

Adapted to all current non-corrosive applications :

- Lamps manufacturing
- Neon signs manufacturing
- Electron tubes evacuation
- TV tubes manufacturing
- Metallurgy
- Centrifuges....

2010SD

From 5 to 21 m³/h:

- **no oil mist pollution** at the exhaust : the natural lubrication design offers the lowest oil mist level, even with high throughputs or frequent cycling between atmosphere and ultimate pressure.
- **compact design** : reduced dimensions, choice of horizontal or vertical inlet and exhaust ports, all controls and service access located on the front.
- **optimized tightness** : integrated anti-suckback ; all static sealings secured by O-rings; external shaft seal can be renewed easily, without dismantling the pump.
- **universal single-phase and three-phase motors** : see page 18.

From 33 to 100 m³/h:

- **forced lubrication** for continuous operation at all pressures.
- **built-in anti-suckback**, activated by the oil pump, for protection of vacuum system against pressure rise.
- **rugged design** for improved efficiency and reliability.
- **universal and specific** three-phase motors, in line with international requirements (see ordering information pages 40 and 41).

2033SD

From 5 to 100 m³/h :

- **high pumping speed** from atmosphere to vacuum.
- **efficient gas ballast** for vapor pumping.
- **air cooled** for optimum performance
- **field serviceable**, using the appropriate maintenance kits.

Oil mist eliminators

During rotary vane pump operation, oil mist escapes from the exhaust port; mainly when pumping between atmospheric pressure and 1 mbar.

Oil mist eliminators retain oil mist contained in the exhausted gases with a high level of separation; an internal over pressure valve prevents exceeding the maximum permissible exhaust pressure.
